

## Building a **Digital Nation**: Kenya's **Inter-Ministerial** Approach

Coordinated Collaboration for Sustainable  
e-Governance

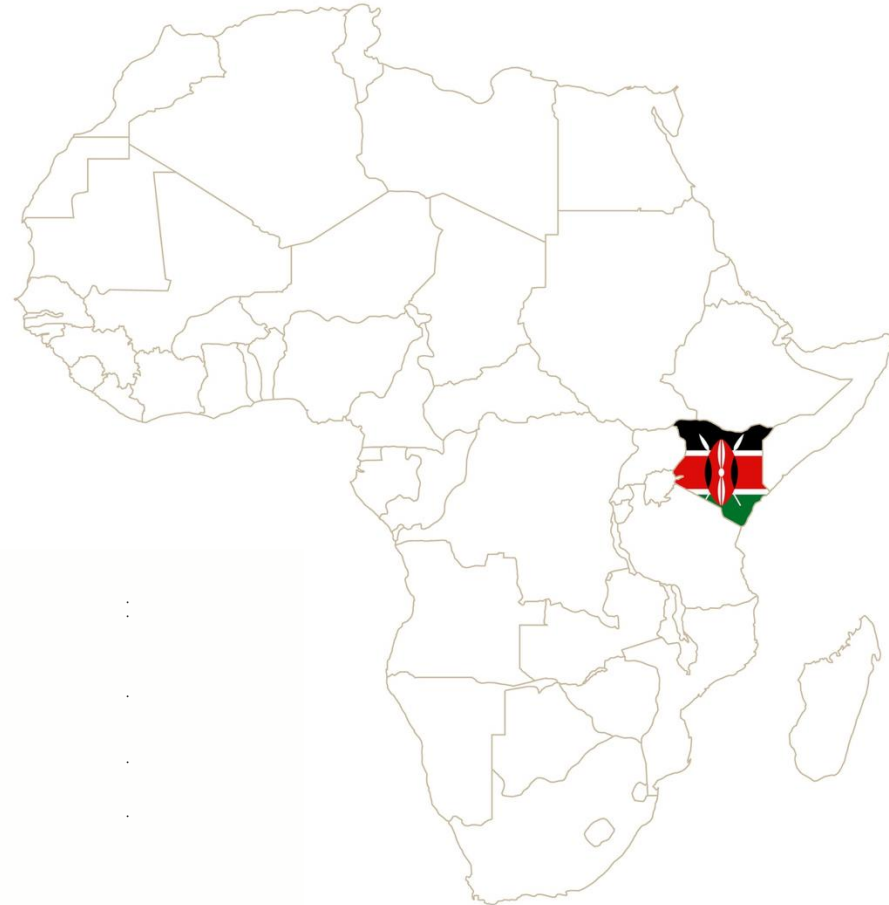

# Setting the Context: A Digital Leader with New Expectations

# Kenya's Digital Leap – The Access Era Is Over

- Over 95% mobile penetration, 89% internet access (CAK, 2024)
- A decade of investment in infrastructure and platforms
- The future is not just about access, it's about coherence, coordination, and citizen value
- E-governance must become more strategic, interoperable, and citizen-centric

---

*“Digital reach is no longer the barrier. Coordination is.”*

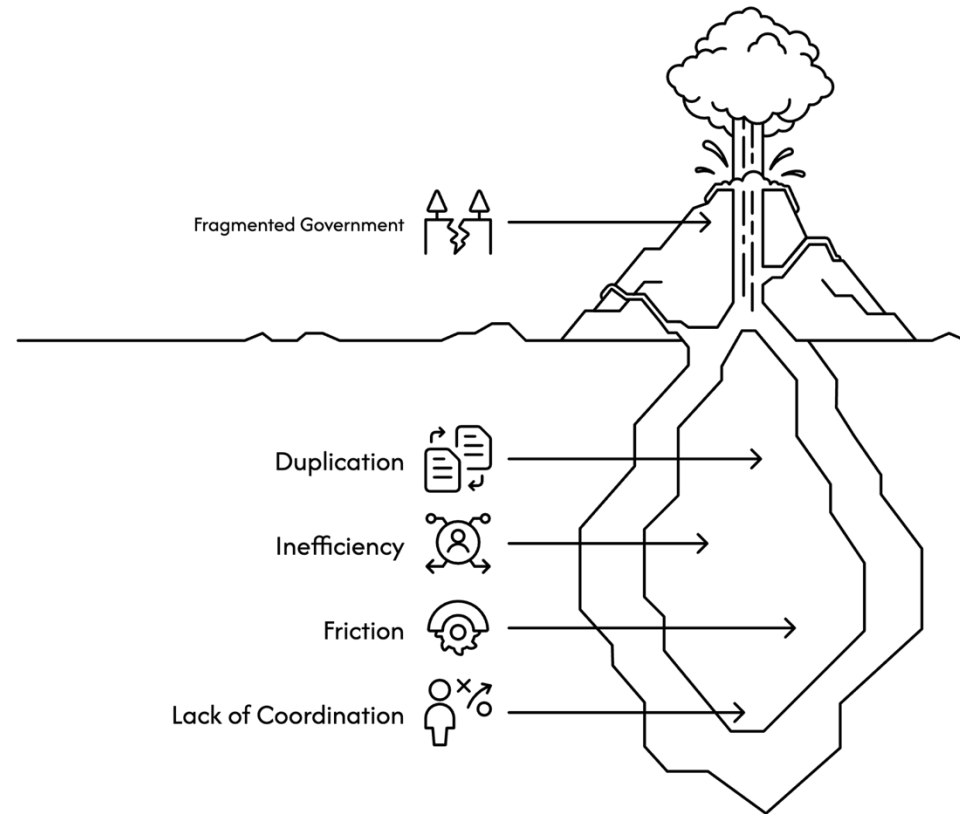

# The Challenge – Fragmentation Across Ministries

## A Patchwork of Progress

- Ministries created digital systems in silos
- Result: duplication of effort, inefficiencies, and inconsistent user experiences
- Lack of interoperability and shared standards block scalability scalability
- Even strong systems failed to integrate across government

*“Well-meaning initiatives, built in isolation, often failed to deliver collectively.”*

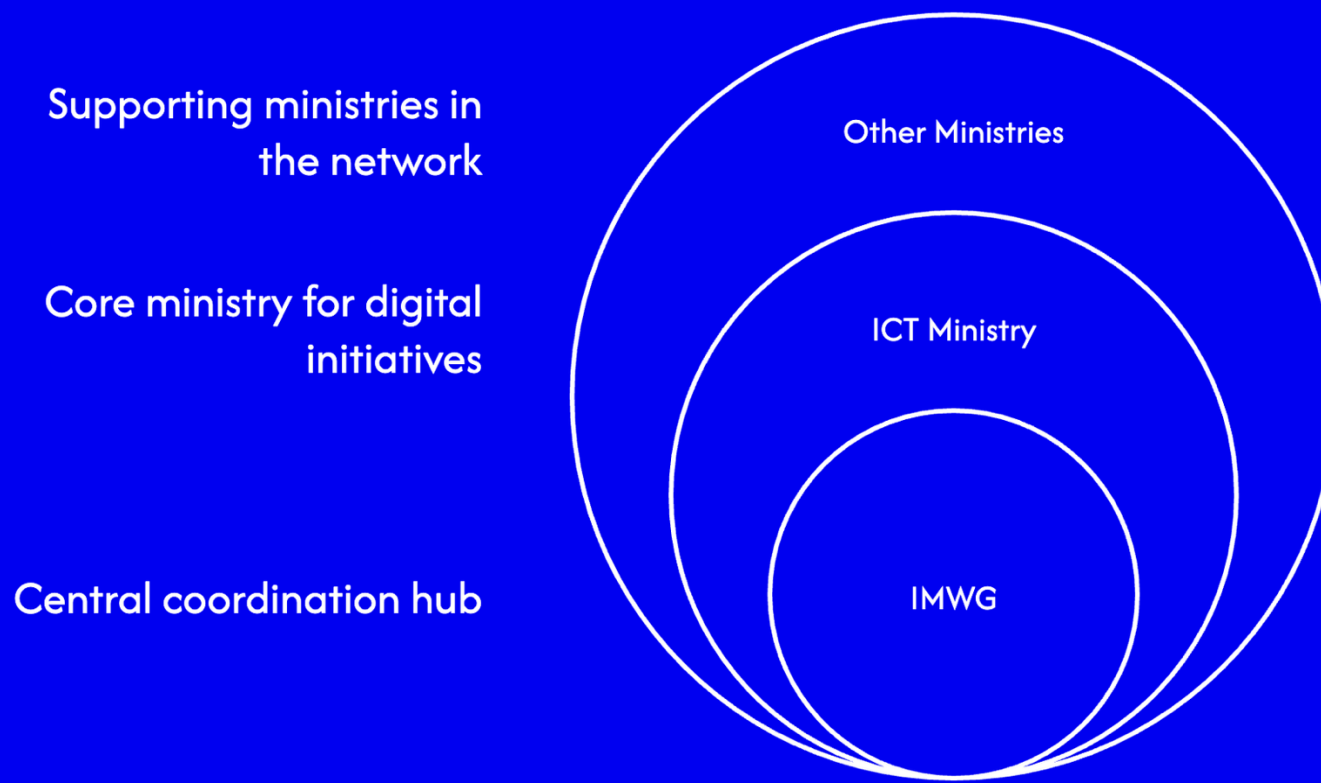

# **The Solution: Inter Ministerial Work Group as a Coordination Engine**

# The Interministerial Working Group (IMWG)

---

## IMWG Coordination Network

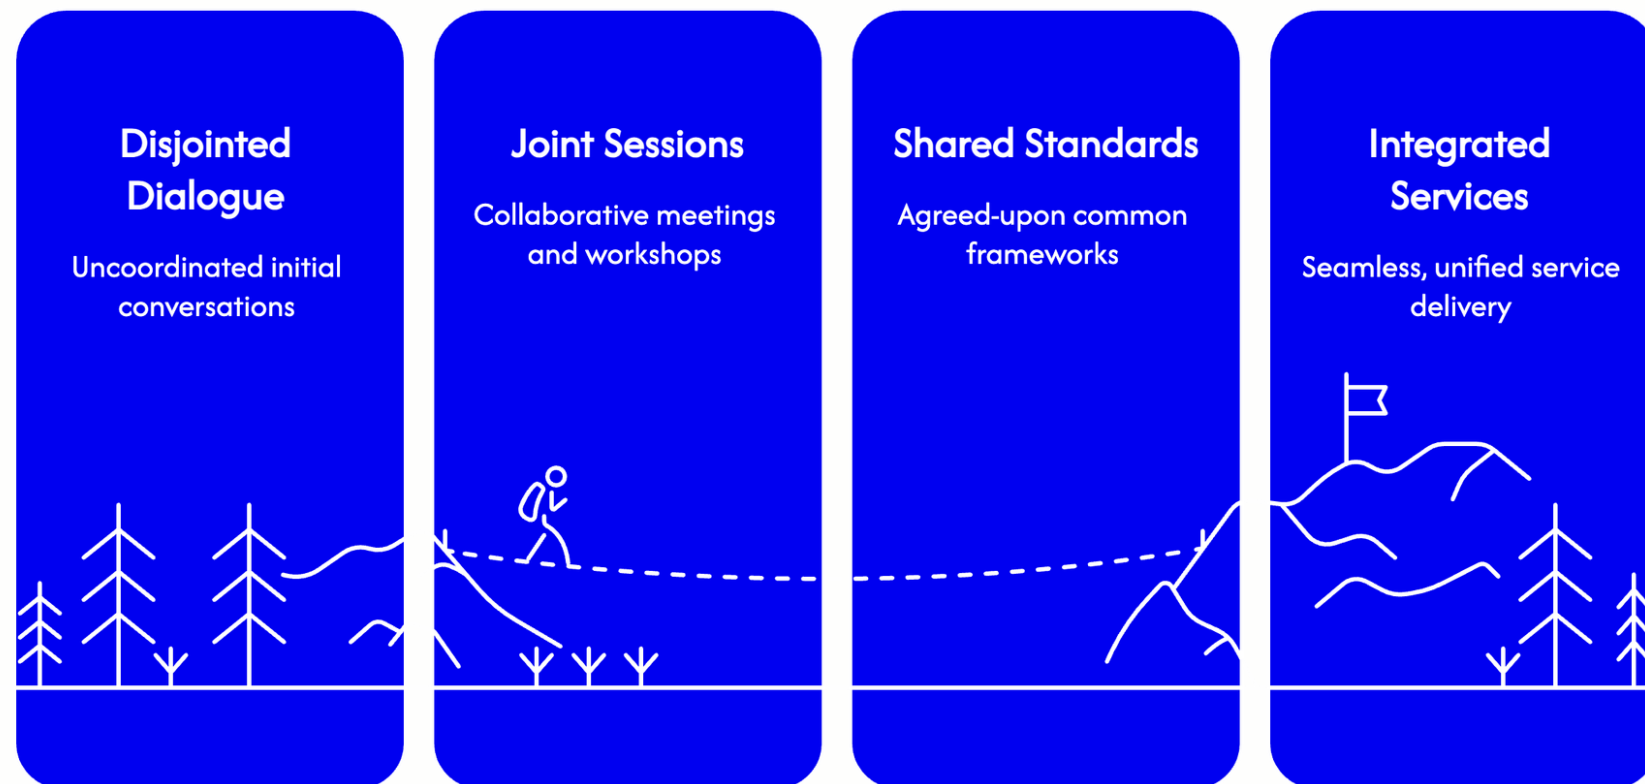

- Led by the Ministry of ICT & Digital Economy
- Supported by ESTDEV and other global partners
- Brings together digital leads across ministries: Interior, Education, Public Service, Planning
- More than a task force — it's a new operating system for collaboration

# What IMWG Enables: From Talk to Action

## Turning Dialogue into Delivery

1. Joint technical working sessions on:
  - Data exchange frameworks
  - Digital identity integration
  - Policy and legal interoperability
2. Shared roadmap for system integration and service design
3. Alignment of KPIs across ministries

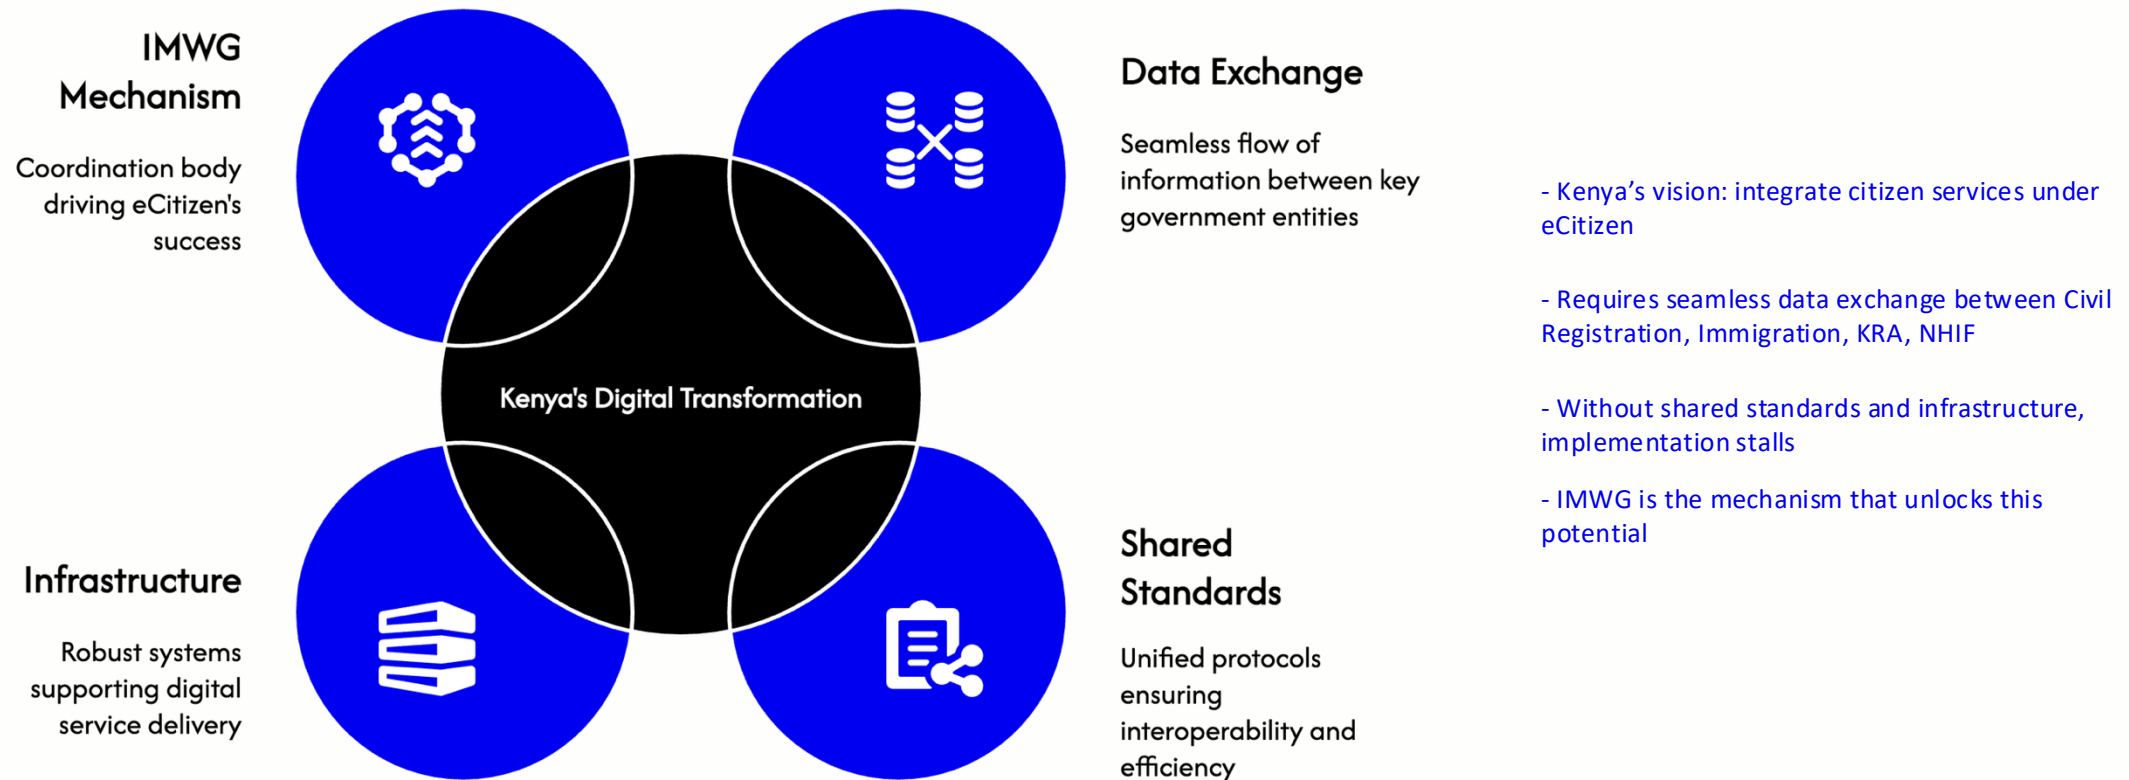

## Achieving Integrated Services

# Case Study: eCitizen and Data Interoperability

# Why **Interoperability** is Non-Negotiable

*"We cannot scale eCitizen without breaking down institutional silos."*

# Our Guiding Principles

## Three Anchors of Kenya's Digital Transformation

### 1. Whole-of-Government Thinking

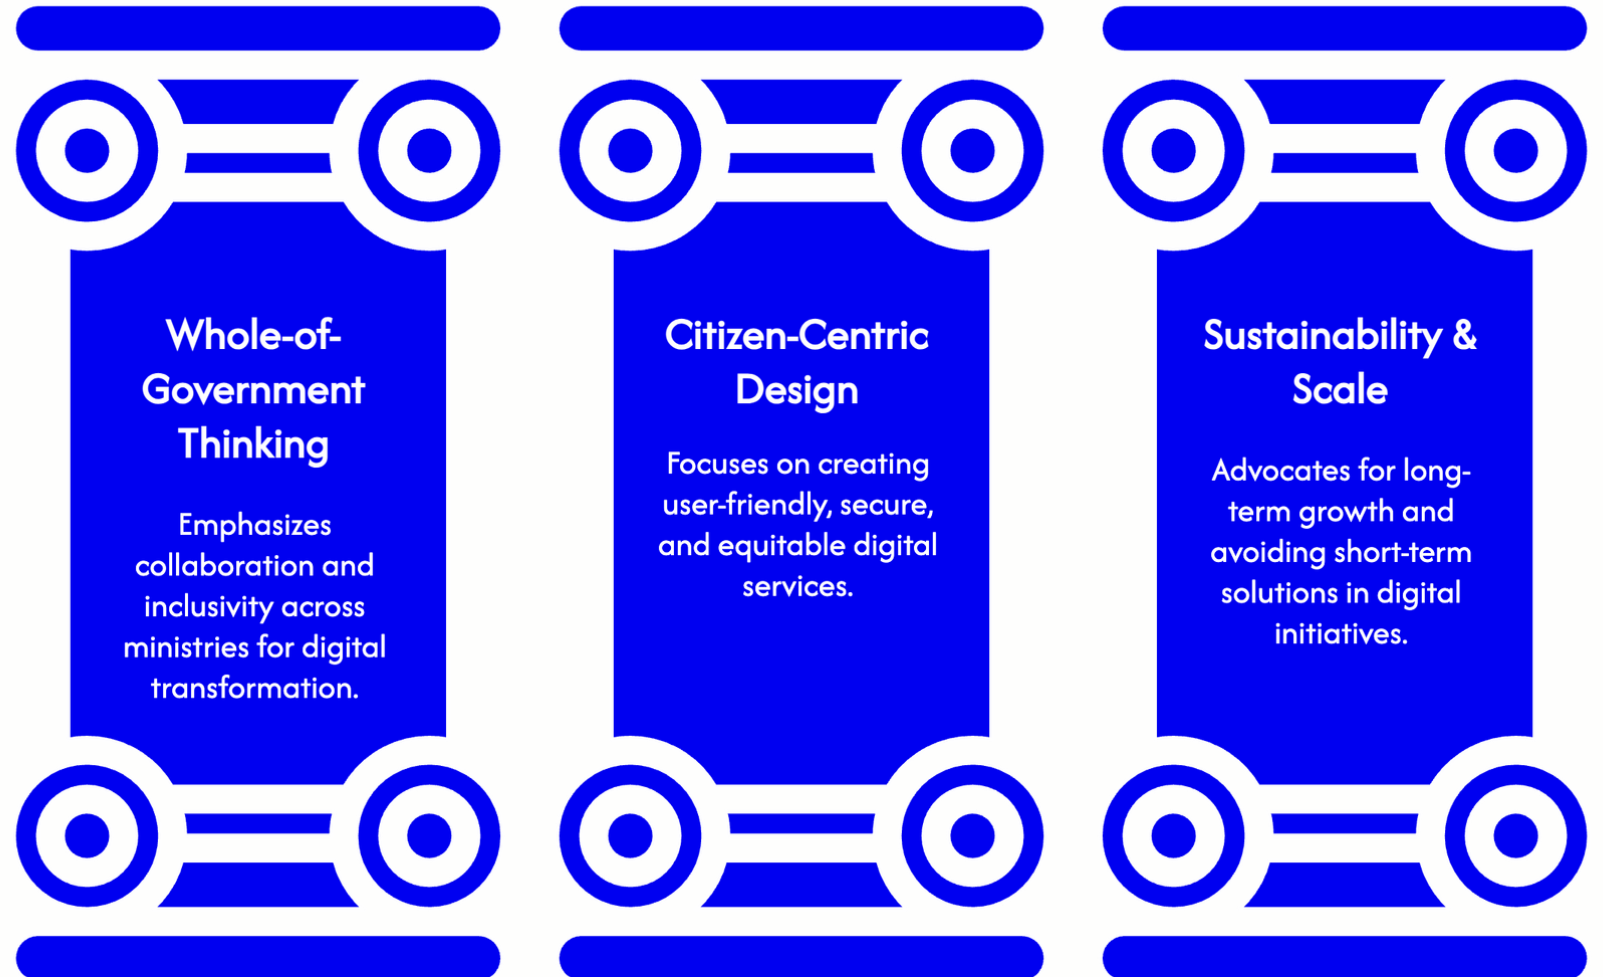

- Digital transformation is a team sport
- No ministry left behind

### 2. Citizen-Centric Design

- Services must be user-friendly, secure, and equitable
- Trust is the currency of e-government

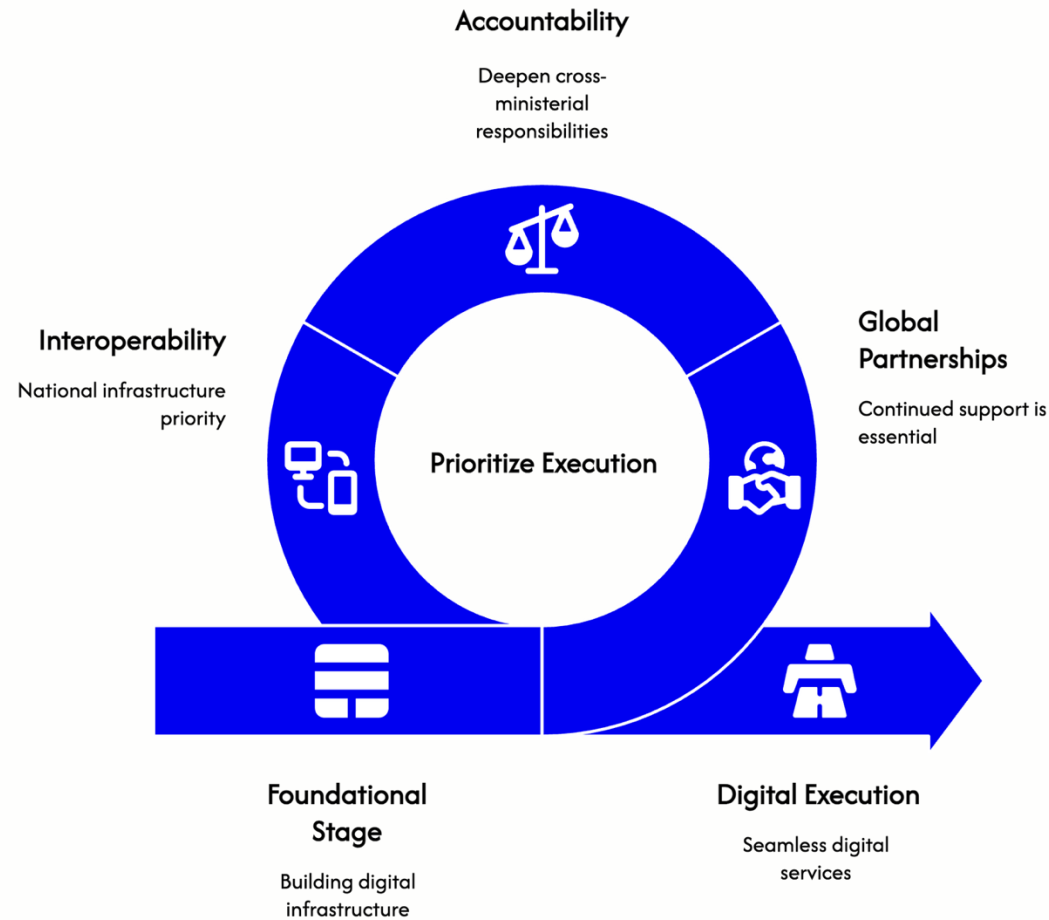

### 3. Sustainability & Scale

- Build for growth and evolution
- Avoid short-term tech fixes

# **Call to Action: From Coordination to Execution**

# The Future is Interconnected, Interoperable, Inclusive

- Kenya's digital journey must now shift from foundation to execution
- Continued support from global partners like ESTDEV is key
- Deepening cross-ministerial accountability.
- Elevating interoperability as a national infrastructure priority

# About me...

---

As the Kenya Operations and Capacity Building Lead at the Estonian Centre for International Development (ESTDEV), I spearhead high-impact initiatives that foster collaboration, operational excellence, and transformative capacity-building across Kenya. With over seven years of cross-sector experience in business development, project management, and International Development, I bring a multidisciplinary approach to driving strategic growth, partnerships, and sustainable development.

Victoria Nkatha -  
Kenya Operations and Capacity building Lead
